

The Topic Summary Reports are a handy way to see which articles may be most relevant to you. These summaries are attempting to distill the complex information down into just a few words. Please see the linked articles for details and complete references.

[Article: Longevity](#)

Gene	RS ID	Your Genotype	Effect Allele	Effect Allele Frequency	Notes About Effect Allele
FOXO3A	rs2802292	--	G	0.43	Linked to increased longevity.
FOXO3A	rs1935949	--	A	0.32	Linked to increased longevity.
FOXO3A	rs479744	GG	T	0.24	Linked to increased longevity.
IGF1R	rs2229765	GG	A	0.42	Linked to increased longevity.
TP53	rs1042522	GG	G	0.28	Linked to increased longevity via reduced cancer risk.
CETP	rs5882	AA	G	0.34	Longer lifespan and a lower risk of dementia.
IMPK	rs6481383	--	T	0.38	TT: Longer lifespan in women.
IL-6	rs2069837	AA	G	0.07	Increased inflammation; fewer centenarians carry this allele.
CYP2B6	rs3745274	TT	T	0.25	TT only: reduced CYP2B6; longevity disadvantage due to cancer risk or toxicant exposure.
COMT	rs4680	AG	A	0.48	AA only: genotype more likely to be found in the elderly

[Article: Klotho / Aging](#)

Gene	RS ID	Your Genotype	Effect Allele	Effect Allele Frequency	Notes About Effect Allele
KL	rs9536314	TT	G	0.14	Increased klotho; Increased lifespan; Decreased cognitive decline; Decreased Alz. Risk in APOE4
KL	rs3752472	CC	C	0.99	CC only: Increased kidney stones; Decreased klotho
KL	rs650439	--	T	0.15	Increased carotid atherosclerosis; lower klotho
KL	rs2283368	--	C	0.13	slightly increased Klotho, slightly increased longevity, less cognitive decline in aging
KL	rs562020	AA	A	0.34	better cognitive function in aging

[Article: Autophagy](#)

Gene	RS ID	Your Genotype	Effect Allele	Effect Allele Frequency	Notes About Effect Allele
ATG16L1	rs2241880	AG	G	0.49	Decreased autophagy; Increased risk of IBD
ATG16L1	rs10210302	CT	T	0.49	Decreased autophagy; Increased risk of Crohn's disease
ATG5	rs573775	--	A	0.29	Inc risk of lupus (with IL-10)
ATG5	rs6568431	--	A	0.37	Decreased autophagy; Increased risk cerebral palsy
IRGM	rs13361189	CT	C	0.12	Increased risk of Crohn's; leprosy
IRGM	rs10065172	TC	T	0.14	Decreased autophagy
IRGM	rs4958847	--	A	0.17	Decreased autophagy

[Article: Telomere Length](#)

Gene	RS ID	Your Genotype	Effect Allele	Effect Allele Frequency	Notes About Effect Allele
TERT	rs10069690	CT	T	0.27	Decreased telomerase
TERT	rs2736100	CC	C	0.49	CC and AC: typical telomere length; AA: Decreased telomere length
TERT	rs2853669	GG	G	0.26	Decreased survival rate in cancers with TERT mutations
TERT	rs2736122	GA	A	0.24	Increased risk of heart disease; stroke
TERT	rs2242652	GG	A	0.18	Decreased telomerase expression
TERT	rs2736108	TT	T	0.27	Longer telomeres
TERC	rs10936599	CC	T	0.24	Decreased telomere length
NAF1	rs7675998	GG	A	0.27	Decreased telomere length
OBFC1	rs9420907	AA	C	0.17	Longer telomeres

[Article: NAD+; NR; NMN](#)

Gene	RS ID	Your Genotype	Effect Allele	Effect Allele Frequency	Notes About Effect Allele
NAMPT	rs61330082	GG	A	0.21	Decreased NAMPT
NAMPT	rs9770242	--	C	0.23	Lower heart disease; lower fasting glucose; insulin
SIRT1	rs3758391	--	T	0.34	Lower risk of heart disease; better cognitive aging
SIRT1	rs12778366	TT	C	0.11	Reduced risk of diabetes complications and reduced mortality risk in aging
SIRT3	rs511744	--	T	0.3	TT only: Increased average lifespan (1.3 years)
BST1	rs4698412	AA	A	0.5	Slightly Increased risk of Parkinson's
SIRT6	rs352493	TT	C	0.06	Increased risk of more severe heart disease
CD38	rs1800561	--	T	0.0004	(rare mutation) significantly decreased or altered CD38, linked to autism spectrum disorder due to changes in oxytocin
CD38	rs1130169	CC	C	0.49	C/C: slightly higher CD38 levels
NAMPT	rs1319501	--	C	0.23	decreased risk of NAFLD, likely higher NAMPT

[Article: Advanced Glycation End Products](#)

Gene	RS ID	Your Genotype	Effect Allele	Effect Allele Frequency	Notes About Effect Allele
AGER	rs2070600	CC	T	0.04	Increased risk of Alzheimer's; diabetic retinopathy; insulin resistance; RA
AGER	rs1800624	AA	T	0.25	Increased AGEs receptor; Increased risk of cardiovascular disease with diabetes;
AGER	rs184003	AA	A	0.09	Slightly Increased risk of diabetes; coronary artery disease
GLO1	rs1130534	--	A	0.14	Increased risk of retinitis pigmentosa

Article: Heat Shock Proteins

Gene	RS ID	Your Genotype	Effect Allele	Effect Allele Frequency	Notes About Effect Allele
HSPA1L	rs2227956	AA	G	0.15	Decreased HSP1; increase risk of male infertility
HSPA1L	rs2763979	CT	T	0.35	Increased risk of noise-induced hearing loss
HSPA1L	rs1043618	--	C	0.3	C/C: Increased risk of heart disease
HSPA1L	rs2075800	CC	T	0.32	Increase risk of lupus
HSPA5	rs391957	--	T	0.37	Increased risk certain cancers; peripheral neuropathy in diabetes
TRAP1	rs113476582	TT	C	0.006	Incr. risk of chronic pain; fatigue; gastro (important)

Article: SIRT3

Gene	RS ID	Your Genotype	Effect Allele	Effect Allele Frequency	Notes About Effect Allele
SIRT3	rs11555236	--	A	0.17	Increased SIRT3; Increased longevity
SIRT3	rs11246020	--	T	0.2	Reduced SIRT3; Increased risk of metabolic syndrome
SIRT3	rs185277566	--	G	0.03	Reduced SIRT3; Increased risk of heart attack.
SIRT3	rs28365927	GA	A	0.13	increased risk of fatty liver disease (NAFLD); increased risk of coronary artery disease
SIRT3	rs3782118	CC	T	0.26	decreased susceptibility to tuberculosis (likely higher SIRT3)

Article: Rapamycin and mTOR

Gene	RS ID	Your Genotype	Effect Allele	Effect Allele Frequency	Notes About Effect Allele
MTOR	rs2536	--	C	0.03	Greater survival rate in gastric cancer (good)
MTOR	rs2295080	--	G	0.4	Increased diabetes risk with rapamycin
MTOR	rs1883965	--	A	0.36	Increased relative risk of esophageal or gastric cancers
RPTOR	rs1062935	TC	C	0.46	C/C: increased risk of a poor prognosis in gastric cancer
DEPTOR	rs4871827	AG	A	0.33	less likely to have vascular complications in type 2 diabetes (good)
mLST8	rs26865	--	G	0.49	increased risk of metastasis with lung cancer
IRS1	rs1801278	CC	T	0.06	Increased risk of insulin resistance, diabetes, osteoarthritis.
ABCB1	rs1045642	GG	A	0.49	reduced drug efflux (less of the drug is moved out of the cell), more likely to have toxicity side effects such as mucositis with everolimus/rapamycin.
CYP3A4	rs35599367	GG	A	0.04	CYP3A4 *22 allele; decreased activity, higher plasma levels of everolimus

[Article: Metformin](#)

Gene	RS ID	Your Genotype	Effect Allele	Effect Allele Frequency	Notes About Effect Allele
TCF7L2	rs7903146	CC	T	0.28	Increased risk T2D, more pronounced response to metformin for T2D
SLC22A1	rs622342	AA	A	0.65	2.7x more likely to be responsive to metformin
SLC22A1	rs12208357	CC	T	0.06	Decreased expression, increased risk of adverse gastrointestinal effects from metformin
SLC22A2	rs316019	AC	A	0.1	Slower clearance of metformin

[Article: BPIFB4](#)

Gene	RS ID	Your Genotype	Effect Allele	Effect Allele Frequency	Notes About Effect Allele
BPIFB4	rs2070325	AG	G	0.36	GG: Long-lived variant; better endothelial function, less likely to be frail
